

N70

N70/4 N70/5 N70/6,5

The N70 range combines aesthetic freedom with maximum efficiency.

With three exclusive sizes it offers a solution for every project. The special size not only provides financial advantages but also ensures more efficient application on site.

- **N70/4** (±240x70x40 mm)
- **N70/5** (±240x70x50 mm)
- **N70/6,5** (±240x70x65 mm)

BUILDING AESTHETICALLY AND ECOLOGICALLY

Benefits

AESTHETIC VERSATILITY

The **N70 range offers a solution for every style.** For a sleek, modern façade, you can choose N70/4 or N70/5. N70/6,5, on the other hand, retains the flexibility for a more traditional application.

LOWER COST

A major advantage of N70 bricks is their competitive price. N70/4, N70/5 and N70/6,5 are **at least 15% more cost-effective** per m² than traditional brick sizes.

LOWER TRANSPORT COSTS

Thanks to their slender shape (the N70 range is only 7 cm deep), N70 bricks weigh less than traditional bricks. This allows more bricks to be transported in a single load. As a result, transport is more CO₂-efficient and **transport costs are reduced by an average of 30%.**

FEWER BRICKS PER M²

Thanks to the longer size of N70 bricks, fewer bricks are required per m². This results in more efficient use of materials, faster application and savings in the overall construction budget. **Fewer bricks per square meter, greater efficiency for every project.**

LESS MORTAR

N70 is also an advantageous choice during application. Its efficient design requires significantly less mortar, resulting in an average **mortar saving of around 30%** compared to traditional brick sizes.

LOWER WEIGHT PER BRICK

Thanks to their slimmer size, N70 bricks are lighter, making them easier to handle on site. This enables **smoother application and faster construction progress.**

Focus on dematerialisation

Nelissen Bricks is committed to reducing energy and raw material consumption without compromising on quality and functionality. The N70 range is just one result of this thought process and fits perfectly within the dematerialisation framework that the entire brick sector in Belgium is committed to.
